Yingjie Huang

(415) 568-6585 | yingjieh512@g.ucla.edu| 512 Veteran Ave apt 202, Los Angeles, CA, 90024

SUMMARY

M.S. Computer Science student at UCLA with rigorous training in computer security, cryptography, systems, and AI reasoning. Experienced in security system design, threat modeling, and compliance-aware technical analysis. Seeking cybersecurity and compliance-focused roles supporting critical infrastructure.

EDUCATION

M.S. Computer Science – University of California, Los Angeles
Sept 2025 – GPA:3.85/4.0

B.A. Computer Science, B.A. Applied Mathematics – University of California, Berkeley
Dec 2024 - GPA: 3.89/4.0

WORK EXPERIENCE

Data for Good Fund, San Francisco, CA

Internship Jun 2020 - Sept 2020

- Prepared, sorted, and entered partnered nonprofits' information into databases from source documents
- Verified input data, made corrections, and obtained further information for incomplete accounts
- Collected potential partners' information via surveys, online tracking, subscription data, etc.

Diablo Valley College, Pleasant Hill, CA

Registered Tutor Aug 2022 – Jan 2023

- Offer help, support, and study advice to math students
- Focus on teaching materials of differential equations, calculus, and linear algebra
- Correct students' homework and offer after-class tutoring

UC Berkeley, Berkeley, CA

Course Reader for MATH 128A-Numerical Analysis, MATH 185-Complex Analysis Aug 2023 – May 2024

- Share information about students' grading with instructors weekly.
- Grade students' homework and provide feedback.
- Discuss with GSIs about students' performance on assignments and adjust the methods of teaching.

RESEARCH and EXTRACURRICULAR ACTIVITY

Undergraduate Student Researcher

OATutor Project Jan 2023 – July 2023

- Develop a website and form free tutoring resources for high school students in preparing for AP exams.
- Give solutions to the AP calculus and physics textbooks and construct hints for each problem.
- Add extra functions and more hints for each problem based on users' feedback and experience.

COMPSCI 61A Academic Intern – UC Berkeley Aug 2023 – Dec 2023

- Provide debugging support to students during the lab sections.
- Worked with the course staff to cover weekly lab sections discussing algorithm design and data structures.
- Perform self-prepared mini-lectures for the course materials.

Computer Science Mentor-Senior Mentor for CS 61B Aug 2023 – May 2024

- Designed and prepared weekly instructional worksheets aligned with core data structures topics and course learning objectives.
- Led weekly mentoring sections and provided one-on-one tutoring for students enrolled in CS 61B (Data Structures).
- Supported students in understanding algorithmic concepts, program behavior, and debugging strategies in large-scale programming assignments. Provide weekly mentoring sections and tutoring to students.

Graduate Student Researcher on Large-Scale Machine Learning Sep 2025 – Dec 2025

- Investigated and compared different heuristic strategies for selecting representative subsets of training data under fixed training objectives.
- Analyzed the impact of dataset selection heuristics on training outcomes, showing equivalent model performance under multiple selection strategies.
- Conducted controlled experiments and documented findings on robustness and invariance of training results with respect to data selection methods.

Projects

Secure File Sharing System

- Designed and implemented a secure file sharing system with confidentiality, integrity, and access control guarantees, achieving the highest testing score among all submissions.
- Applied cryptographic primitives for secure key management, encryption, and authorization to prevent unauthorized access or tampering.
- Conducted comprehensive threat modeling to identify and mitigate risks including key compromise, unauthorized decryption, and replay attacks.

Gitlet – Git-Like Version Control System

- Designed and implemented a Git-like version control system supporting commit history, branching, merging, and rollback functionality.
- Managed file versioning and state transitions to ensure consistency and correct recovery across multiple repository states.
- Developed and tested core components for persistence, change tracking, and conflict handling in a large-scale Java codebase.

ADDITIONAL INFORMATION

Language: English, Mandarin and Cantonese
Technical Skill*:* C, MATLAB, Java, SQL and Python.
